Clinical

I re-started the Cochlear Implant programme at the hospital.

Over 150 cochlear implants performed

Includes revision cases and eradication of acquired cholesteatomas after CI and re-implantation

Last 2 years, almost all simultaneous bilateral implants

Mostly children under 3 years. Youngest 9 months

9 cases performed Saudi German Hospital, Jeddah

Experience with Medel, Cochlear and Advanced Bionics

I have concentrated on Otology and Rhinology

Introduced and taught percutaneous tracheotomy for ITU, saving the inconvenience of transferring patients to the OR for tracheotomy.

Increased the use of the Day Surgical Unit for all ENT cases

Established outpatient Coblation surgery for nasal obstruction and snoring (turbinoplasty and palatoplasty) under local anaesthesia.

This is the premier hospital in the Middle East and I have dealt with a lot of unusual tertiary referral sinus cases, including...

Mucormycosis,

Skull base osteomyelitis

Juvenile nasal angiofibromas

Frontal mucocoeles

Giant osteomas

Inverted papillomas

CSF leaks.

Endoscopic DCR

Orbital Decompression

Educational

Course director for the course at KFSH&RC on FESS in April 2011 and lectured on learning to perform balloon sinoplasty.

Research - Coblation Tonsillectomy

A surgeon is indeed lucky if once in his career he develops a surgical procedure that has a profound impact on the practice of the rest of his peers.

With Coblation Tonsillectomy I found a clumsy operation that would never spread, and converted it into a user-friendly procedure that has changed the way many surgeons around the world perform our most common procedure.

I have carried out **and published** randomized controlled trials in children and in adults that have shown a reduction in post-operative pain, and the department in East Lancashire, UK has carried out several thousand Coblation Tonsillectomies and shown a 50% reduction in post-operative haemorrhage rates, thus reducing re-admissions to the ENT wards.

I wrote the Operation Technique guide supplied with the equipment

Surgeons from the UK, Europe and the rest of the world have attended my **instructional workshops in Blackburn**, held three times a year from 2003 to 2008

I have given **presentations** on this technique at meetings throughout the U.K. Europe, Africa, The Middle East and The Far East, including to the British Academic Conference in Birmingham and the American Academy Meeting, Orlando, USA

I have published a number of **papers** in internationally recognized journals on Coblation tonsillectomy and other Coblation procedures that I have developed.

I produced an **instructional DVD** that has gone out to every ENT specialist in Britain, Europe and Asia in different languages.

Articles have appeared in the local and **national press and radio** regarding Coblation tonsillectomy in Blackburn.

Endoscopic Sinus Surgery (FESS)

It is difficult to describe how crude sinus surgery was in 1990. However, a new treatment
modality was evolving in Germany and Austria around the time when I was completing
my training as a senior registrar. FESS, based on rigid endoscopes linked to TV monitors
and using ultra-fine instruments, enabled these pioneering surgeons to safely and
effectively treat sinus disease at a depth inside the head that still frightens some of
today's surgeons.

I used my **elective period as a senior registrar in Tutlingen and Erlangen, Germany**,
learning this technique from leading experts in the field.

I have performed over 4000 such procedures, both on adults and children. No longer are
patients subjected to painful nasal packing and splints, and all are treated as **day-cases**.

I taught our **senior registrars** the technique, many of whom have gone on to specialise in
the field of FESS. Blackburn is regarded in the Region as the place to learn this type of
surgery.

I extended the uses of FESS so that from 1998 - 2008 I carried 500 **Endoscopic Dacrocystorhinostomies** in the East Lancashire district at the request of the ophthalmologists and have continued to do so in Saudi Arabia. I also collaborate with ophthalmologists and endocrinologists, carrying out Endoscopic **Orbital Decompression** for patients with dysthyroid eye disease and **Trans-sphenoidal Hypophysectomy**.

Sabbatical...During my time on the South Manchester leg of the rotation, having already passed my CCST Accreditation interview, I took a one month sabbatical in April 1991 at the University Hospital in Tübingen, Germany at the invitation of Professor Hans Peter Zenner. This allowed me to observe the workings of a different European health system and also to compare their levels of training and operative expertise.

I also visited the University Hospital in Erlangen, Germany during this sabbatical to watch Professor Wigand performing surgery, particularly FESS, which was still in its infancy.
